NOTE: Read all directions before beginning
Corpenenters Glue should be used to reinforce all joints
Set all nails and countersink all screw holes
Dimensions in brackets denote millimeters

Directions

1) Lay out your material on the workbench, or on sawhorses, as outlined in the materials layout (Fig 1). Draw out all joints exactly as shown in the drawings. Use a hand plane to smooth the wood and leave a small space between cut lines to allow for the width of the saw. Before cutting, double check all measurements to ensure they are correct. Always cut on the waste side of the line. Sand all edges, sanding in a motion from the inside of the wood to the cut. Use a jigsaw to cut the handles in pieces C (Fig 3). Use a miter box to cut the 45 degree end cuts for pieces K and L, the long measurements are given.
