During step two, ensure the frame remains square. Assemble the acute assembly as shown (Fig 8) with the outside measurement between the two meets about 20" trey will be adjusted later (1" from the bottom ends. Use a drill a hole 3/4" deep in pieces J. centerd. 1" from the bottom ends. Use a drill depth gauge as shown (flustration 1). Place the axis in with a hole of the procedure. Drill a 1/8" hole in each piece J. 5 7/8" from the bottom, going in the same direction as the axis. Countersink with a 1/4" bit on the outside edges. Place a piece H between the pieces J. He bottom edge 5" above the bottom of J. and drill a 1/16" hole into through the hole previously drilled in J. Remove H. ensure the 1/16" hole is 1 1/2" deep, glue the ends, re-insert and screw H in with 3" #8 flathead screws, one of each end. Drill one more 1/8" hole in each hole is 1 1/2" deep, glue the ends, re-insert and screw in the two pieces N. 7 5/8" from the bottom. Drill similar holes in pieces N. 7 5/8" from the bottom. Place in pieces H between N and J. and drill pith hole in the bottoms. Place in pieces H between N and J. and drill pith hole in the bottoms. Place in pieces H between N and J. and drill pith hole in the bottoms. Place in pieces H between N and J. and drill pith hole in the bottoms. Place in pieces H between N and J. and drill pith hole in the bottom between the two pieces H and I light holes, glue and screw in the two pieces H are flush and test. Fully from the bottom ends. Drill, countersink, drill pith holes, glue and screw in the the deges of all the pieces H are holes and each piece H bottom ends of the bottom level H with 3" #8 liathead screws. Ensure that the edges of all the pieces H are holes and the later of pieces H (NOTE: II you are going to take holes and prove botte on the lower shell, measure the height of the bottom pieces C and F into the peecs H to assist with the extra weight.)

Drill two I pieces H are that from the bottom edge flush with the bottom edge of H, and providing J.4" from each ends. The botto

- 3) Center piece B under A with the outside edges flush and a gap 3/4" on the inside as shown (Fig 9). Irace the outline of A on B, and remove B. Pre-crill the marked edges of B with two 1/8" holes each, countersink with a 1/4" bit the marked edges, turn A over and screw B to A with 1/4" Bit flathed screws. Drill the two pieces M with eight 1/8" holes, two on each end 3/4" from each end. Countersink with a 1/4" bit. Hold one piece M up to pieces N and drill 1/16" piec holes into pieces M. Repeat with the other piece M into pieces J. Glue and screw the pieces into N and J with 1 1/2" #8 flathead screws. Glue and screw the pieces M nod J with 1 1/2" #8 flathead screws. Glue the top edges of pieces M, and the tops of N and J, and place top A on the frame. One of the pieces M, should fill the 3/4" gap between B and A Noil through A into pieces M, N, and J with 1 1/2" finishing nails.

  Blunt the ends of the nails to prevent splitting.
- 4) Cover the surface of B with a firm of glue, place in two tiles. Glue the edges and ends of K and L. place in the cutout, and noil to piece A with 1 1/2" finishing noils. Cover the surface of A with glue and loy in the tiles. Ensure that the tiles do not protrude over the edge of A. Glue the edges of A and B, noil on pieces C and D with 1 1/2" noils Bunt the ends of the eight noils for attaching C into D to prevent splitting. Wipe off excess glue and allow the cort to dry overnight.
- Tighten nuts so that the wheels do not wabble, but not so much as they will not turn. Set nails and fill noil and screw holes with wood putty. A hint, to match your stain and putty, stain a small patch of wood and allow stain to dry. Mix enough stain into the putty to match dry colored stain. Sand entire project and stain.

5

## On materials:

We suggest the use of clear cedar.

## ROLLING BARBEQUE CART - Project #209 www.easywoodplans.com Easy Wood Plans ے Directions Loy out your material on the workbench, or on sawhorses, as outlined in the materials layout (Fig. 1 and 2). Draw out all parts exactly as illustrated, including the letter designations, in penal. Ensure to leave a small space between cut lines to allow for the width of the saw. Before cutting, double check all measurements to ensure they are correct. Always cut on the waste side of the line. Sand all edges, sanding in a motion from the inside of the wood to the cut. Use a nigraw to cut the bhadles in pieces C (Fig. 3). Use a miter box to cut the 45 degree end cuts for pieces K and L, the long measurements are #7B, 2316-27Ave N.E. Calgary, Alberta Canada, T2E 7A7 Read all directions before beginning Carpenters Glue should be used to reinforce all joints Set all nails and countersink all screw holes Dimensions in brackets denote millimeters DRILL DEPTH GAUGE ILLUSTRATION 1 depth desired Make a depth gauge for your drill — by drilling through a 3/4" x 3/4" piece of wood lengthwise.
